Physical Chemistry (Graduate)       Spring 2013

Course Number:  CHEM 6525  
Course Title:   Physical Chemistry II  3 Credits  
Day:           Wednesday  
Time:          2:00 pm – 4:30 pm  
Room:          DH 1143  
Instructor:    Dr. Arthur R. Murphy  
Office: DH 4456  
Office Hours:  M W F 1:00 AM– 1:50 AM ,  
and by appointment  
Telephone No:  201-692-2322  
e-mail         arthur_murphy@fdu.edu

Required Text:  Atkins’ Physical Chemistry (9th Edition) by Peter Adkins and Juilo De Paula  

Catalog Description for Physical Chemistry II.  
Principles of thermodynamics, kinetics, quantum chemistry, statistical mechanics, spectroscopy, and molecular  
structure. Assumes prior knowledge of MATH 2202 Calculus II or equivalent.

Policies and Procedures:  
1) All cell phones, beepers, and pagers must be turned off during lecture.  
2) Students are expected to arrive for class on-time so as not to disrupt a lecture in progress.  
3) All homework assignments will have a due date on them: Typically a student will have two weeks in which  
to complete an assignment. Late homework assignments will not be accepted.  
4) Last Day for dropping the course with a grade of "W" is April 8th.

Grading Policy

Homework     40 %  
Exams:       40 %  
Term Paper  20 %  (Term paper Rules are described in a separate document).

Introduction:  
Chemists, and other scientists are interested in the properties and behavior of chemical systems, and these  
systems show patterns and regularities that can be analyzed using quantitative physical principles. Physical  
Chemistry provides us with a powerful organizational tool to study phenomena encountered in many areas of  
chemistry, biology, and physics. Schematically:

Physical Chemistry Principles  (both the macro and micro worlds and the relationships between them)  

P. Chem-Graduate- syllabus page - 1
Physical Chemistry is one of the corner stones of science, and it is composed of many sub-areas among which are:

1) Classical and non-classical Thermodynamics (macroscopic approach) including phase chemical and phase equilibria.
2) Statistical Mechanics (microscopic approach to thermo)
3) Quantum Chemistry (atomic and molecular structure)
4) Spectroscopy (Ex. Vibr., Rot., electronic, NMR etc.)
5) Kinetics (Reaction rates, mechanisms)
6) Electrochemistry
7) Biophysical Chemistry
8) Computational Chemistry

Objectives:
In the Graduate Physical Chemistry course, we will focus on the following:

a) Selected topics in thermodynamics.

b) The postulates and use of Introductory Quantum Chemistry.

c) Applications of quantum theory to atoms, molecules, and spectroscopy will be explored. Various mathematical and computer techniques will be presented as needed.

d) Introductory Chemical Kinetics will be investigated.

e) If time permits, various aspects of one or more of the following will be investigated: statistical mechanics, chemistry of solids, electrochemistry.

Course objectives and outcomes:

Objective 1: Introduction Essential concepts from the Calculus will be reviewed. If available, Mathcad and other software will be demonstrated. (Programmatic Outcome #1,3,4,5,6)

Outcome 1.1 If available, students will learn to use the basic features of Mathcad. This software can be used to perform arithmetic and symbolic calculations as well as graphical analysis.

Objective 2: To learn the structure of Quantum Mechanics and how it is applied to systems of chemical interest. (Programmatic Outcome #1,3,4,5,6)

Outcome 2.1: Students should have reviewed the mathematics associated with elementary Quantum Mechanics including certain aspects of linear algebra

Outcome 2.2: Students should understand the postulates of Quantum Chemistry and how to apply this knowledge to atomic and molecular structure. Students should be comfortable applying this knowledge to chemical bonding and spectroscopy.

Objective 3: Student should learn key concepts associated with introductory Statistical Mechanics. (Programmatic Outcome #1,3,4,5,6)

Outcome 3.1: Students will have reviewed some basic mathematics needed to study statistical mechanics.
**Outcome 3.2:** Students will review the fundamental laws of

**Outcome 3.3:** Students should understand what a partition function is and how this information is applied to translational, rotational, vibrational, and electronic aspects of molecules.

They should be able to apply this information to the study of various monatomic and polyatomic ideal gases.

If time permits, one or more of the following objectives will be explored.

**Objective 4:** To learn basic aspects of both experimental and theoretical chemical kinetics and how this information is applied to problems of chemical interest. (Programmatic Outcome #1,3,4,5,6)

**Outcome 4.1:** Students will have reviewed and deepened there understanding of differential rate laws, integrated rate laws, temperature dependence of of reaction rates, and reaction mechanisms.

**Outcome 4.2:** Students should understand how parallel, and consecutive reactions are handled. They should also have a rudimentary knowledge of nuclear decay and enzyme kinetics.

**Objective 5:** To learn basic aspects of both experimental and theoretical electrochemistry, and how this information is applied to problems of chemical interest. (Programmatic Outcome #1,3,4,5,6)

**Outcome 5.1:** Students will have reviewed and deepened there understanding of galvanic and electrolytic cells.

**Objective 6:** Students should learn some basic aspects of crystal structures. (Programmatic Outcome #1,3,4,5,6)

**Outcome 6.1:** Students should know about the types of bonding encountered in solids

**Outcome 6.2:** Students should know about the various common crystal structures and how these are determined.

**ADDITIONAL “OUTCOMES”**

Students who successfully complete this course should have a good background for pursuing other courses in in chemistry and other sciences that require knowledge of the material addressed in this course.

**TEACHING METHODOLOGIES / ACTIVITIES**

1) The fundamental method of transmitting material to the students is by means of traditional lectures.

2) Web resources will be used where appropriate.

3. If available, students will receive instructions on how to use Mathcad. Knowledge of this software should greatly help students with their homework assignments.

4) In order to assess student’s understanding of the material, major hourly exams as well as homework assignments will be given.
TENTATIVE LECTURE SCHEDULE

Expectations:
1) In order to be successful in this course, students are expected to be proficient in the use of calculus. A good background in the scientific applications of microcomputers is also very desirable. However, use of pertinent software will be reviewed as needed.
2) Students will be expected to become familiar with the primary Physical Chemical literature. This includes current books, current Journals, monographs, and Web sites devoted to Physical Chemistry.
3) One of the keys to success in a Physical Chemistry Course is to do lots of problems. In additional to Physical Chemistry textbooks, P. Chem. problem solving books exist, and a short list of those most likely to be of use to students is given in the “Literature” section of this syllabus.

The Physical Chemistry Literature – a First Look.

I. Books containing many solved problems are:
   A. Adamson, Arthur W., Understanding Physical Chemistry, Benjamin-Cummings 3rd Ed., 1980. This paperback has been placed on reserve in the library.
   B. Labowitz, Leonard, Arents, J., Physical Chemistry Problems and Solutions. Academic Press, 1969. This paperback has been placed on reserve in the library.
   D. Fogiel, M., Ogden, J. The Physical Chemistry Problem Solver: a complete solution guide to any textbook. Research and Education Assn. 1994 (paperback.)

II. Textbooks

P. Chem-Graduate- syllabus page - 4

C. Atkins, Peter, Physical Chemistry 6th Edition, Freeman, 1998. I prefer some of the earlier editions of this textbook. Graphics are good and there is a large selection of problems at the end of each chapter.

D. Noogle, J., Physical Chemistry 2nd Edition, Scott Foresmen and Co. This is a very good P. Chem textbook. It deserved more recognition than it received. Lots of good problems.

F. Lesk, A., Physical Chemistry, Prentice Hall, 1982. This is another textbook that deserved more recognition than it received. Many of the subjects were given a fresh look. More problems could have been included.

III. Useful Math textbooks

C. Daniels, Farrington, Mathematical Preparation for Physical Chemistry, McGraw-Hill 1956. This book is somewhat dated, but beginning students may find some of the discussions of interest.

IV. Physical Chemistry and Computers

A. Noogle, J., Physical Chemistry Using MathCad, Pine Creek Pub., 1997. This book provides a nice introduction to computer applications in many areas of Physical Chemistry. I only wish that more advanced applications were included.

V. Physical Chemistry and the Web

Throughout this course, URL’s will be given to interesting P. Chem. Sites.

VI. Some Physical Chemistry Journals of interest.

A. The ACS Journal of Physical Chemistry Parts A,B, C are available on line as part of FDU’s e-journals. Years ago, this journal was not divided into three sections.

B. The Journal of Chemical Physics. Older issues of this journal are available at FDU’s library. For current issues, consult libraries at other institutions.
C. Physical Chemistry related e-journals are

(i) Theochemica Acta
(ii) Electrochemica Acta
(iii) Electrochemistry Communications
(iv) Chemical Physics
(v) Chemical Physics Letters
(vi) Journal of Computational Chemistry
(vii) Journal of Molecular Structure (TheoChem)

**Academic Integrity Policy**

Students enrolled at Fairleigh Dickinson University are expected to maintain the highest standards of academic honesty. Students have the responsibility to each other to make known the existence of academic dishonesty to their course instructor, and then, if necessary, the department chair, or the academic dean of their College. Course instructors have the added responsibility to state in advance in their syllabi any special policies and procedures concerning examinations and other academic exercises specific to their courses. Students should request this information if not distributed by the instructor.

Academic dishonesty includes, but is not necessarily limited to, the following:

1. **Cheating**—Giving or receiving unauthorized assistance in any academic exercise or examination. Using or attempting to use any unauthorized materials, information, or study aids in an examination or academic exercise.

2. **Plagiarism**—Representing the ideas or language of others as one's own. A more complete description is listed below in the section titled "Plagiarism Described."

3. **Falsification**—Falsifying or inventing any information, data, or citation in an academic exercise.

4. **Multiple Submission**—Submitting substantial portions of any academic exercise more than once for credit without the prior authorization and approval of the current instructor.

5. **Complicity**—Facilitating any of the above actions or performing work that another student then presents as his or her assignments.

6. **Interference**—Interfering with the ability of a student to perform his or her assignments.

**Plagiarism Described**

As defined by the Council of Writing Program Administrators, plagiarism “occurs when a writer deliberately uses someone else’s language, ideas, or other original (not common-knowledge) material without acknowledging its source.” (“Defining and Avoiding Plagiarism: The WPA Statement on Best Practices.”<http://www.wpacouncil.org/positions/WPAplagiarism.pdf>)

Plagiarism can occur in the following ways:**

- Using text from another source (e.g. websites, books, journals, newspapers, etc.) without documenting the source;
- Using direct quotation from a text without quotation marks, even if the source has been cited correctly;
- Paraphrasing or summarizing the ideas or text of another work without documenting the source;
- Substituting a word or phrase for the original while maintaining the original sentence structure or intent of the passage;
- Using graphics, visual imagery, video or audio without permission of the author or acknowledgment of the source;
- Translating text from one language to another without citing the original work;
- Obtaining packaged information, foreign language translation or a completed paper from an online source and submitting it as one’s own work without acknowledgment of the source; and
- Presenting the work of another student as one’s own.
Fairleigh Dickinson students are responsible for authenticating any assignment submitted to an instructor should the instructor request it. Students must be able to produce proof that the assignment they submit is actually their own work. Therefore, students must engage in a verifiable work process on all assignments:

- Keeping copies of all drafts of work;
- Making photocopies of research materials (including downloads from websites);
- Writing summaries of research materials;
- Keeping Writing Center receipts;
- Keeping logs or journals of their work on assignments and papers; and
- Saving drafts or versions of assignments under individual file names on a computer, external drive or other source.

In addition to requiring students to authenticate their work, Fairleigh Dickinson University instructors may employ various other means of ascertaining authenticity—such as using search engines to detect plagiarism, using external plagiarism detection services, creating quizzes based on student work, and requiring students to explain their work and/or process orally. The inability to authenticate work is sufficient grounds for a charge of plagiarism.

If subsequent evidence of plagiarism should be found after a grade has already been assigned, instructors have the right to lower the grade and/or apply one of the sanctions listed below.

**Sanctions:** Any student violating academic integrity will, for the first offense, receive one or a combination of the following penalties imposed by the faculty member:

1. **No credit (0) or Failure** for the academic exercise.
2. **Reduced grade** for the course.
3. **Failure** in the course.
4. Recommendation for Academic Probation to the dean of the college in which the student is registered.

The instructor shall file a notice of the penalty in the student’s file maintained in the campus Office of Enrollment Services.

In cases of interference and complicity, whether or not the student is registered in the affected course, the incident and penalty shall be recorded in the student's file maintained in the campus Office of Enrollment Services.

For a subsequent violation of academic integrity, a student will be subject to any combination of the above sanctions, and, after due review by the academic dean according to the procedure below, one of the following:

1. **Suspension** from the University for one year. Readmission will be contingent upon the approval of the academic dean.
2. **Dismissal** from the University.
3. **Dismissal from the University identified on the student’s academic transcript as a result of a violation of the Academic Integrity Policy.**

**Procedure:** When a faculty member believes that a student has violated the Academic Integrity Policy, the faculty member shall discuss the incident with the student as soon as possible. If after the conference, the faculty member determines that an act of academic dishonesty has occurred, the faculty member may impose the appropriate sanctions. Within five days of the faculty member’s action, the faculty member shall notify his or her department chair/school director in writing of the circumstances of the violation and the imposed sanctions. Within five days the academic department/school shall notify the student via certified mail/return receipt of the sanctions and the appeals’ procedures. Copies of the notice shall be sent to the chair of the department or director of the school of the student's major, the dean of the college in which the course is offered and the campus Office of Enrollment Services. The student may appeal the instructor’s decision as outlined below. Upon completion of the appeals process, the dean shall notify the student of the final disposition of the matter and the sanctions to be imposed, if any, via certified mail with copies to the faculty member, the department chair/school director and the campus director of enrollment services.
Appeals Process: A student who is charged with violating the Academic Integrity Policy by an instructor may appeal in writing to the chair of the department or the director of the school in which the alleged incident took place. The letter must state the specific grounds for the appeal. The student must submit a written appeal to the department chair or school director within 14 days of the receipt of the notification of the imposed sanctions. Failure to make an appeal within this 14-day period shall constitute a waiver of the appeal right. Within 10 working days of the receipt of the student’s appeal, the chair/director will review the circumstances of the alleged violation with the student and the instructor and recommend upholding, modifying, or dismissing the sanctions imposed by the instructor. The chair/director, within five working days, shall notify the student in writing via certified mail of the outcome, with copies to the instructor, the chair/director of the student’s major, the academic dean of the college in which the course is taught and the campus director of enrollment services. If it is determined that a violation of academic integrity did not occur, the student’s final grade in the course cannot be based on the assumption of such violation. If the differences between the instructor and the student are not resolved by this review, the student may appeal the outcome to the dean of the college in which the course is offered.

Within 10 working days of the department chair/school director’s notification, the student may submit a written appeal to the dean of the college in which the alleged dishonesty took place. The letter must state the specific grounds for the appeal. Upon receipt of the student’s appeal, the dean shall provide the faculty member and his or her chair/director with a copy of the student’s appeal. Within 10 working days the dean shall convene a five-person hearing committee consisting of a faculty member at large from the college in which the course is offered, the dean or his or her designee, the campus dean of students or his or her designee, a faculty member from the department or school of the student’s major, and a student, selected by the campus dean of students, from the college in which the alleged dishonesty took place. The hearing will be chaired by the college dean or his or her designee. The role of the appeals committee is to review the record of the matter and determine whether a finding of academic dishonesty is founded and whether a sanction is consistent with the terms of this policy. The committee shall base its decision upon a review of the record but may meet with the student and the faculty member to secure additional information to help it in making a determination about the merits of the appeal. The committee can uphold, modify or dismiss the sanction imposed by the instructor. The college dean shall notify the student of the committee’s decision within five working days of the hearing. For a second offense of academic dishonesty, the academic dean can suspend or dismiss the student as indicated above.

For a sanction of suspension or dismissal imposed by the academic dean, the student may file a written appeal to the University Provost/Senior Vice President for Academic Affairs within 10 working days of receiving the notification of the dean’s decision. The University Provost, or his or her designee, shall review the case within 10 working days of the receipt of the appeal. The University Provost shall make the final decision, using any appropriate resource to assist in deciding the appeal. The University Provost shall then notify all parties in writing of his or her final decision within five working days of his or her decision.
